

FOR IMMEDIATE RELEASE

SecureZIP v12.1 Wins PC Magazine Editors' Choice Award

Brings Public Key Cryptography to Every Type of User

Milwaukee, Wis. (May 28, 2008) – PKWARE®, the leading provider of data-centric security solutions, today received the PC Magazine Editors' Choice® award for SecureZIP® Standard Edition for Windows® desktop, version 12.1.

After conducting a review of SecureZIP v12.1, PC Magazine gave the product its coveted Editors' Choice award, the second such honor for SecureZIP in the past two years. "SecureZIP does everything you'd expect from a ZIP archive utility and much more. It makes securing e-mail attachments and messages simple and brings public key cryptography into every user's reach," said Neil Rubenking, lead analyst at *PC Magazine*.

This latest version of SecureZIP revolutionizes public key cryptography by making it available to and easily used by businesses and consumers, novices, or power users. The new SecureZIP lets every person protect his or her most important and sensitive files by automatically installing an X.509 digital certificate and providing global directory services so files can be securely exchanged without requiring passwords.

In addition, the new release fully integrates with Microsoft Office® and email applications, including Word, Excel, and PowerPoint, making Microsoft Office a secure application. SecureZIP for Windows Enterprise Edition provides, in addition to the Standard Edition features, contingency key functionality so businesses can access and recover files encrypted by employees.
